

BJA Bureau of
Justice Assistance

Introduction to Human Judgment Interference Factors for Law Enforcement

Presented by Missouri-Regional Community Policing Institute
Via funding from Bureau of Justice Assistance

June 7-8, 2012
8am to 5pm

Hosted by:

Michigan Regional Community Policing Institute
School of Criminal Justice
Michigan State University

Training Location:

Michigan State Police Training Academy
7426 N. Canal Rd.
Lansing, MI 48913

This two-day course is designed to provide attendees with an awareness of **Judgment Interference Factors Initiative (JIFI)** and the understanding of JIFI concepts that, when utilized, can serve as a valuable tool to improve law enforcement operations by reducing errors in low-frequency/high risk activities (pursuits, use of weapons, felony car stops, etc.)

Judgment Interference Factors, a product of human factors engineering, is a key tool in investigating aviation accidents and the prevention of future accidents. This training brings those concepts to law enforcement operations where lives are dependant on performance.

JIFI training will include:

- An organizational assessment to identify any policies and/or procedures that may be increasing the potential for officer mistakes or failures.
- Review of performance factors which will help minimize errors and improve organizational processes in identifying potential crisis and improved strategies for post-crisis analysis.
- Review of the “Dirty Dozen” Judgment Interference Factors
- Illustration that only 4 of the 12 “Dirty Dozen” need be present to allow for a crisis event to occur.

Training is FREE---Space is LIMITED—Register EARLY!

*Lunch and break refreshments are the responsibility of each participant.
A cafeteria is available at MSP Training Academy*
